

BCS Digital Industries Apprenticeship

Standard Specific Guidance for Training Providers

Level 4 Cyber Security Technologist Apprenticeship

Version 5.0
April 2019

Change History

Any changes made to the project shall be clearly documented with a change history log. This shall include the latest version number, date of the amendment and changes made. The purpose is to identify quickly what changes have been made.

Version Number and Date	Changes Made
V1.0 June 2017	Document created
V1.1 September 2017	Removed SFIAplus codes
V2.0 November 2017	Updated competencies
V3.0 January 2018	Update to technical competencies, knowledge standards and work activities.
V4.0 January 2019	Document updated with revised SFIAplus codes and new format.
V5.0 April 2019	Updates to proficiencies Business Skills, Complexity, Autonomy and Influence throughout the document.

Cyber Security Technologist Template 5 – Declaration and Evidence Checklists for the Completion of the Summative Portfolio	72
Cyber Security Technologist Template 6 – End-Point Assessment Readiness Check	85

Purpose of this Document

The purpose of this document is to provide useful information and suggested supporting documentation specific to the cyber security technologist apprenticeship. It should be read in conjunction with the BCS General Guidance for Apprentices, Employers and Training Providers document and is designed to give training providers some tools to help them build their own programme from training plan through to end-point assessment.

This guide will provide:

- supporting information around how to help the cyber security technologist apprentice to meet and go beyond the standard;
- a number of useful documents to support the training provider in meeting their responsibilities in managing the apprenticeship from training plan through to the end-point assessment;
- evidence checklists to help the training provider support the apprentice in completing their summative portfolio;
- a template for completing the employer reference.

Introduction

The BCS Level 4 Cyber Security Technologist Apprenticeship is one of the suite of Digital Industries Apprenticeships that have been designed by the industry to address skills shortages and meet the ever-changing needs of UK employers.

The General Guidance for Apprentices, Employers and Training Providers provides the broad view on how to run an apprenticeship programme to the BCS Digital Industries Standard. The collection of tables and templates contained within this document has been designed to give training providers the tools to build their programme and to assist them in helping apprentices and employers towards the successful completion of each element of the end-point assessment.

The areas where a training provider should be involved in ensuring a successful outcome to the apprenticeship are:

- mapping and assessing work against the standard;
- advising the employer and the apprentice on which knowledge modules, vendor or professional certificates and other relevant training and activities are most appropriate for their requirements, and agree a suitable training plan;
- assisting the apprentice with applying knowledge in the workplace;
- acting as an advisor to the apprentice and the employer to ensure the programme remains on track and any concerns are addressed;
- helping the apprentice to select evidence for their summative portfolio;
- supporting the apprentice through the synoptic project;
- confirming the apprentice's readiness for the end-point assessment.

The following series of checklists can be used by the training provider to help manage the process through to completion. Training providers may substitute their own processes and documentation as they see fit in order to effectively manage their key areas of responsibility as set out above.

Standard Specific Guidance for Training Providers – Cyber Security Technologist

V5.0 April 2019

The Cyber Security Technologist Apprentice

The primary roles of a cyber security technologist are to:

- apply an understanding of cyber threats, hazards, risks, controls, measures and mitigations to protect organisations, systems and people;
- achieve required security outcomes in a legal and regulatory context in all parts of the economy;
- develop and apply practical knowledge of information security to deliver solutions that fulfil an organisation's requirements.

Job titles may be different across different organisations so the role may also be referred to as cyber operations manager, security architect, penetration tester, security analyst, risk analyst, intelligence researcher, security sales engineer, cyber security specialist, information security analyst, governance and compliance analyst, information security assurance and threat analyst, forensics and incident response analyst, security engineer, information security auditor, security administrator or information security officer.

Business Proficiencies

The proficiencies that should be demonstrated by an apprentice cyber security technologist are listed below.

Business skills

- The apprentice can demonstrate an analytical and systematic approach to issue resolution.
- The apprentice takes the initiative in identifying and negotiating appropriate personal development opportunities.
- The apprentice can demonstrate effective communication skills.
- The apprentice can contribute fully to the work of teams.
- The apprentice plans, schedules and monitors own work (and that of others where applicable) competently within limited deadlines and according to relevant legislation, standards and procedures.
- The apprentice can appreciate the wider business context, and how their role relates to other roles and to the business of the employer or client.

Complexity

- The apprentice can perform a range of work, sometimes complex and non-routine, in a variety of environments.
- The apprentice can apply a methodical approach to issue definition and resolution.
- The apprentice undertakes all work in accordance with agreed safety, technical and quality standards, using appropriate methods and tools.

Autonomy

- The apprentice can operate under general direction.
- The apprentice uses discretion in identifying and responding to complex issues and assignments.

Standard Specific Guidance for Training Providers – Cyber Security Technologist

V5.0 April 2019

- The apprentice can receive specific instructions and has work reviewed at frequent milestones.
- The apprentice can determine when issues should be escalated to a higher level.

Influence

- The apprentice interacts with and influences colleagues.
- The apprentice has working level contact with customers, suppliers and partners.
- The apprentice may supervise others or make decisions which impact the work assigned to individuals or phases of projects.
- The apprentice makes decisions which influence the success of projects and team objectives.

Knowledge standards, technical competence and behaviour and relationship standards

Tables 1, 2 and 3 contain details of the topics that the training provider may decide to cover in their development plans and scheduled work activities in order to stretch the apprentice.

Table 1 – Cyber Security Technologist – Knowledge Standards

The knowledge standards define learning that must take place during the apprenticeship, **both through the activities and the apprentice's own independent learning**. The additional learning outcomes detailed in the table show how a training provider can stretch the apprentice's learning beyond the requirement as set out in the occupational brief. However, it is important to remember that stretching the apprentice in this way will only have a bearing on their final grading if the impact is demonstrated through their competence in the end point assessment. These knowledge standards, therefore, show the additional learning that may support the apprentice in improving their overall competence. Technical knowledge and understanding is assessed throughout the apprenticeship through a combination of Ofqual regulated knowledge modules and specified vendor and professional qualifications. These must be passed before the end point assessment can take place.

Knowledge standard	Expected requirement	Suggested learning outcomes to meet the standard and stretch the apprentice to exceed the minimum requirement
<p>Understands the basics of cyber security.</p>	<p>The apprentice will be able to explain;</p> <p>Why cyber security matters</p> <ul style="list-style-type: none"> • Explain why information and cyber security is important to business and society. <p>Basic security theory</p> <ul style="list-style-type: none"> • Explain basic concepts: security, identity, confidentiality, integrity, availability, threat, vulnerability, risk and hazard. This should illustrate an understanding of what fundamentally security is and the basic concepts of risk, threat, vulnerability and hazard. • Explain how the concepts of threat, hazard and vulnerability relate to each other and lead to risk. Describe in simple terms what risk is and how risks are usually characterised (likelihood and impact) and illustrate by use of at least one commonly used tool (e.g. a risk register). • Understand the inherent asymmetric nature of cyber security threats. • Describe and characterise (in terms of capability, opportunity and motive) examples of threats and also describe some typical hazards that may concern an organisation. Recognise that there are different types or classes of threat 	<p><u>Why Cyber Security Matters</u></p> <p>Describe and explain the evaluation of information assets and the criticality to a business.</p> <p>Describe and explain how cyber security can have a direct impact on the reputation and continuing success of a business.</p> <p>Describe and explain how the cyber security of businesses contributes to the overall economy and security of the society in which it operates.</p> <p><u>Basic Security Theory</u></p> <p>Recall and explain key terminology.</p> <ul style="list-style-type: none"> • Security • Identity • Authentication • Non-repudiation • Confidentiality • Integrity • Availability • Threat • Vulnerability • Risk and hazard <p>Describe what security is, fundamentally, by explaining:</p> <ul style="list-style-type: none"> • How the concepts of threat, hazard and

Table 2 – Cyber Security Technologist – Technical Competency Standards

The competency standards have been defined to demonstrate that the knowledge learnt has been applied in real work tasks, activities and projects in a business environment.

Competencies are assessed throughout the apprenticeship through a combination of the employer reference, the synoptic project and a summative portfolio completed by apprentices from records of the work activities in which they have been involved.

The training provider should assist the employer to identify suitable work tasks, activities and projects within the scope of their normal business activities for the apprentice to practice what they have learnt and to demonstrate the competencies below.

The BCS Apprenticeship is mapped to an internationally recognised skills framework and to work activities in which a cyber security technologist apprentice would be involved.

The following table sets out these competencies and the expected requirements against the work activities that might be demonstrated at and beyond the minimum expectation. The format is explained below:

Competency standard	Expected requirement	Work activities demonstrating the minimum expected level of competence
<i>This column contains the competency as it is listed in the apprenticeship standard.</i>	<i>This column shows the expected requirements listed in the occupational brief for a successful outcome.</i>	<p><i>This column shows recognised work activities that demonstrate that the apprentice is meeting the expected requirement.</i></p> <p><i>The apprentice should be able to demonstrate all of these activities.</i></p>

The Cyber security technologist competency standard, requirements and activities demonstrating competence follow:

Competency standard	Expected requirement	Work activities demonstrating expected level of competence
Threats, hazards, risks and intelligence	<p>The apprentice should be able to:</p> <ul style="list-style-type: none"> • Discover (through a mix of research and practical exploration) vulnerabilities in a system. • Analyse and evaluate security threats and hazards to a system or service or processes. Be aware of and demonstrate relevant external sources of threat intelligence or advice (e.g. CERT UK) and combine different sources to create an enriched view. • Research and investigate some common attack techniques and recommend how to defend against them. Be aware of and demonstrate use of relevant external sources of vulnerabilities (e.g. OWASP). • Undertake a security risk assessment for a simple system without direct supervision and propose basic remediation advice in the context of the employer. 	<ul style="list-style-type: none"> • Reviews network usage. Assesses the implications of any unacceptable usage and breaches of privileges or corporate policy. Recommends appropriate action
Developing and using a security case	<p>The apprentice should be able to:</p> <ul style="list-style-type: none"> • Source and analyse a security case (e.g. a Common Criteria Protection Profile for a security component) and describe what threats, vulnerability or risks are mitigated and identify any residual areas of concern. • Develop a simple security case without supervision. (A security case should describe the security objectives, threats, and for every identified attack technique identify mitigation or security controls that could include technical, implementation, policy or process). 	<ul style="list-style-type: none"> • Conducts security control reviews in well defined areas. Assesses security of information and infrastructure components. Investigates and assesses risks of network attacks and recommends remedial action.

Competency standard	Expected requirement	Work activities demonstrating expected level of competence
Organisational context	<p>The apprentice should be able to:</p> <ul style="list-style-type: none"> Identify and follow organisational policies and standards for information and cyber security. Operate according to service level agreements or employer defined performance targets. 	<ul style="list-style-type: none"> Supports service level management in monitoring the impact of network problems on agreed service levels.
Future Trends	<p>The apprentice should be able to investigate different views of the future (using more than one external source) and trends in a relevant technology area and describe what this might mean for a business, with supporting reasoning.</p>	<ul style="list-style-type: none"> Uses new approaches, proposals and technologies to build a credible strategy, building on understanding of business needs, the existing IT capabilities and future requirements, marrying all relevant organisation objectives with achievable IT goals.
Design build and test a network	<p>The apprentice should be able to;</p> <ul style="list-style-type: none"> Design, build, test and troubleshoot a network incorporating more than one subnet with static and dynamic routes, that includes servers, hubs, switches, routers and user devices to a given design requirement without supervision. Provide evidence that the system meets the design requirement. 	<ul style="list-style-type: none"> Produces outline system designs and specifications covering objectives, scope, features, facilities, management, reliability, resilience, security, constraints (such as performance, resources and cost), hardware, network and software environments, main system functions and information flows, traffic volumes, data load and implementation strategies, phasing of development, requirements not met, and alternatives considered.
Analysing a security case	<p>The apprentice should be able to;</p> <ul style="list-style-type: none"> Analyse security requirements (functional and non-functional security requirements that may be presented in a security case) against other design requirements (e.g. usability, cost, size, weight, power, heat, supportability etc.), given for a given system or product. Identify conflicting requirements and propose, with reasoning, resolution through appropriate tradeoffs. 	<ul style="list-style-type: none"> Explains the purpose of and provides advice and guidance on the application and operation of elementary physical, procedural and technical security controls. (For example the key controls defined in IS27002). Communicates information assurance risks and requirements effectively to users of systems and networks.

Standard Specific Guidance for Training Providers – Cyber Security Technologist

V5.0 April 2019

Competency standard	Expected requirement	Work activities demonstrating expected level of competence
Structured and reasoned implementation of security in a network	<p>The apprentice should be able to;</p> <ul style="list-style-type: none"> • Design and build a simple system in accordance with a simple security case. Provide evidence that the system has properly implemented the security controls required by the security case. The system could be either at the enterprise, network or application layer. • Select and configure at least 2 types of common security hardware and software components to implement a given security policy. • Design a system employing a crypto to meet defined security objectives. Develop and implement a key management plan for the given scenario/system. 	<ul style="list-style-type: none"> • Contributes to the development of solution architectures in specific business, infrastructure or functional areas, using appropriate tools and methods.

Criteria for demonstrating Significantly higher competencies.
Understands and applies a wide range of tools and methods.
Accurately and appropriately applies and effectively implements the right tools and methods in a variety of different situations.
Extensive and deep understanding of different tools and methods and how and why they can be applied in different contexts.
Deals confidently and capably with a high level of interrelated and interdependent factors in their work.

Table 3 – Generic Behaviour and Relationship Standards

The behaviour and relationship standards have been defined to demonstrate that the apprentice applies the good behaviours and interpersonal skills that are needed in a business environment. Behaviours and business relationship skills are assessed throughout the apprenticeship through a combination of the employer reference, the synoptic project and a summative portfolio, which is completed by apprentices from records of the work activities in which they have been involved. The training provider could assist the apprentice by offering some additional soft skills training over and above their apprenticeship. The apprenticeship standard sets out the attributes required within the occupation brief, which can be accessed via the Apprenticeship section of www.bcs.org.

Behaviour and relationship standard	Expected requirement
Apprentices can demonstrate the full range of skills, knowledge and behaviours required to fulfil their job role.	<p>Knows what skills, knowledge and behaviours are needed to do the job well.</p> <p>Are aware of their own strengths in the job role, and any areas for improvement.</p> <p>Appreciate who else is important, for them to do their job and fulfil the role effectively (e.g. colleagues, managers, other stakeholders).</p> <p>Are aware of potential risks in the job role (e.g. security, privacy, regulatory).</p> <p>Use personal attributes effectively in the role, e.g. entrepreneurship.</p> <p>Understand how the job fits into the organisation as a whole.</p>
Apprentices can demonstrate how they contribute to the wider business objectives and show an understanding of the wider business environments.	<p>Understands the goals, vision and values of the organisation.</p> <p>Aware of the commercial objectives of the tasks/ projects they are working on.</p> <p>Understands the importance of meeting or exceeding customers' requirements and expectations.</p> <p>Is in tune with the organisation's culture.</p>

Behaviour and relationship standard	Expected requirement
<p>Apprentices can demonstrate the ability to use both logical and creative thinking skills when undertaking work tasks, recognising and applying techniques from both.</p>	<p>Logical thinking:</p> <ul style="list-style-type: none"> • Recognises the conclusion to be reached; • Proceeds by rational steps; • Evaluates information, judging its relevance and value; • Supports conclusions, using reasoned arguments and evidence. <p>Creative thinking:</p> <ul style="list-style-type: none"> • Explores ideas and possibilities; • Makes connections between different aspects; • Embraces ideas and approaches as conditions or circumstances change.
<p>Apprentices can show that they recognise problems inherent in, or emerging during, work tasks, and can tackle them effectively.</p>	<p>Problem-solving:</p> <ul style="list-style-type: none"> • Analyses situations; • Defines goals; • Contributes to the development of solutions; • Prioritises actions; • Deals with unexpected occurrences.
<p>Apprentices can manage relationships with work colleagues, including those in more senior roles, customers / clients and other stakeholders, internal or external, and as appropriate to their roles, so as to gain their confidence, keep them involved and maintain their support for the task / project in hand.</p> <p>Apprentices can establish and maintain productive working relationships, and can use a range of different techniques for doing so.</p>	<p>Managing relationships:</p> <ul style="list-style-type: none"> • Understands the value and importance of good relationships • Acknowledges other people's accomplishments and strengths • Understands how to deal with conflict • Promotes teamwork by participating <p>Customer/client relationships:</p> <ul style="list-style-type: none"> • Understands their requirements, including constraints and limiting factors • Sets reasonable expectations • Understands how to communicate with them in decisions and actions • Interacts positively with them • Provides a complete answer in response to queries ('transparency', 'full disclosure') <p>Stakeholders:</p> <ul style="list-style-type: none"> • Understands who they are and what their 'stake' is

Standard Specific Guidance for Training Providers – Cyber Security Technologist

V5.0 April 2019

Behaviour and relationship standard	Expected requirement
	<ul style="list-style-type: none"> • Prioritises stakeholders in terms of their importance, power to affect the task and interest in it • Agrees objectives
<p>Apprentices can communicate effectively with a range of people at work, one-to-one and in groups, in different situations and using a variety of methods.</p> <p>Apprentices can demonstrate various methods of communication, with an understanding of the strengths, weaknesses and limitations of these, the factors that may disrupt it, and the importance of checking other people's understanding.</p>	<p>Intention/purpose:</p> <ul style="list-style-type: none"> • Understands the purpose of communicating in a particular situation or circumstance (e.g. inform, instruct, suggest, discuss, negotiate etc.) • Checks that the person/people with whom one is communicating also understand the purpose • Is sensitive to the dynamics of the situation • Is aware of anything that might disrupt the effectiveness of the communication (e.g. status, past history) <p>Method:</p> <ul style="list-style-type: none"> • Understands the most appropriate method for the situation • Aware of the limitations of the chosen method, and the possible risks of miscommunication (e.g. ambiguity) • Takes account of the affective dimensions of the method (e.g. body language, tone of voice, eye contact, facial expression etc.) <p>Execution:</p> <ul style="list-style-type: none"> • Expresses self clearly and succinctly, but not over-simplifying • Checks that the other person/people understand what is being expressed • Takes account of the potential barriers to understanding (e.g. filtering, selective perception, information overload) • Modifies the purpose and methods of communication during a situation in response to cues from the other person/people

These attributes are difficult to measure and are subjective in nature so cannot actually guarantee that any greater level of competence or proficiency is being demonstrated. The BCS Apprenticeship is mapped to the Skills Framework for the Information Age (SFIA), an internationally recognised skills framework and to observable activities that a cyber security technologist apprentice working to the level of responsibility appropriate for the role should demonstrate. Accordingly, the proficiencies that should be demonstrated by an apprentice in cyber security technologist are shown below.

Standard Specific Guidance for Training Providers – Cyber Security Technologist

V5.0 April 2019

Proficiency standard	Work activities demonstrating expected level of proficiency	Work activities demonstrating competence beyond the minimum expected
Business skills	<p>Demonstrates an analytical and systematic approach to issue resolution.</p> <p>Takes the initiative in identifying and negotiating appropriate personal development opportunities.</p> <p>Demonstrates effective communication skills.</p> <p>Contributes fully to the work of teams.</p> <p>Plans, schedules and monitors own work (and that of others where applicable) competently within limited deadlines and according to relevant legislation, standards and procedures.</p> <p>Appreciates the wider business context, and how their role relates to other roles and to the business of the employer or client.</p>	<p>Selects appropriately from applicable standards, methods, tools and applications.</p> <p>Undertakes work that is more complex, more critical or more difficult.</p> <p>Demonstrates an ability to extend or enhance their approach to work and the quality of outcomes.</p> <p>Doesn't just solve the problem but explores all known options to do it better, more efficiently, more elegantly or better meet customer needs.</p> <p>Shows good project management skills, in defining problem, identifying solutions and making them happen.</p>
Complexity	<p>Performs a range of work, sometimes complex and non-routine, in a variety of environments.</p> <p>Applies a methodical approach to issue definition and resolution.</p> <p>Undertakes all work in accordance with agreed safety, technical and quality standards, using appropriate methods and tools.</p>	<p>Demonstrates a disciplined approach to execution, harnessing resources effectively.</p> <p>Drives solutions – with strong goal focused and appropriate level of urgency.</p>
Influence	<p>Interacts with and influences colleagues.</p> <p>Has working level contact with customers, suppliers and partners.</p>	<p>Externally – works with customers, suppliers, and partners in a variety of situations.</p> <p>Actively works with others and leads by example.</p>

Proficiency standard	Work activities demonstrating expected level of proficiency	Work activities demonstrating competence beyond the minimum expected
	<p>May supervise others or make decisions which impact the work assigned to individuals or phases of projects.</p> <p>Makes decisions which influence the success of projects and team objectives.</p>	
Autonomy	<p>Works under general direction.</p> <p>Uses discretion in identifying and responding to complex issues and assignments.</p> <p>Usually receives specific instructions and has work reviewed at frequent milestones.</p> <p>Determines when issues should be escalated to a higher level.</p>	<p>Internally – works alone, 1:1, in a team and with colleagues at all levels.</p> <p>Reads situation, adapts behaviours, and communicates appropriately for the situation and the audience.</p> <p>Can be trusted to deliver, perform and behave professionally, manages and delivers against expectations, proactively updates colleagues and behaves in line with the values and business ethics.</p>

Cyber Security Technologist Apprentice Templates

The following templates are designed to support the training provider, and will take them from training and development planning, through to the end-point assessment readiness check. As with the tables above they can be used by the training provider to help them manage the process through to completion, although training providers may also substitute their own processes and documentation as they see fit in order to effectively manage their programme.

Cyber Security Technologist Template 1 – Training and Development Plan

Role mapping against the Cyber Security Technologist standard

For each area of technical and behavioural competence an overall evaluation should be provided on a three-point scale to show how often this competence is required during the normal work carried out by the employer:

- **critical** – this competence is applied most of the time;
- **desirable** – this competence is applied some of the time;
- **occasional** – this competence is rarely required.

This evaluation could form the basis of an ongoing review with the apprentice on a regular basis.

Workplace competence map

The template shows the type of activities that are identified in the apprenticeship standard for Cyber Security Technologist as demonstrating the required competencies being applied in the workplace.

It is recognised that there are differences between the types of work carried out by different employers, so this template provides the opportunity to include any other activity that demonstrates the apprentice’s competence during their normal duties.

The tables below could be used to make an evaluation of the apprentice’s work environment and detail the work activities that a competent apprentice should be able undertake. This activity should then lead to a discussion to identify any gaps with the employer and make a plan to redress the balance.

In the normal course of work, is the apprentice exposed/required to:	Critical	Desirable	Occasional
Threats, hazards, risks and intelligence	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>
Developing and using a security case	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>
Organisational context	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>
Future trends	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>
Design build and test a network	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>
Analysing a security case	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>
Structured and reasoned implementation of security in a network	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>

What is your overall evaluation of the apprentice's opportunity to demonstrate the technical competencies in the employer's normal workplace environment?

Please continue on a separate sheet if required.

Knowledge module training plan

The knowledge standards define learning that should take place during the apprenticeship, **both through the training provider activities and the apprentice's independent learning**. The training provider should work with the employer to identify appropriate training for the apprentice to meet the requirements of the standard and the employer should identify opportunities within the scope of their normal business activities for the apprentice to demonstrate what they have learnt.

Knowledge and understanding will be delivered through BCS qualifications and vendor certifications in accordance with the Cyber Security Technologist standard.

Training plan – knowledge

BCS qualification	Completed Y/N
BCS Level 4 Certificate in Cyber Security Introduction	
BCS Level 4 Certificate in Network and Digital Communications Theory	
BCS Level 4 Certificate in Security Case Development and Design Good Practice

Standard Specific Guidance for Training Providers – Cyber Security Technologist

V5.0 April 2019

Technical competence development plan

The following template may be used to describe how to ensure that the apprentice will be given the opportunity to demonstrate each of the required technical competencies stated in the Cyber Security Technologist standard.

Competency requirement to meet the standard	How will this be ensured?	Responsibility (employer or training provider)?
Threats, hazards, risks and intelligence		
Developing and using a security case		
Organisational context		
Future trends		
Design build and test a network		
Analysing a security case		
Structured and reasoned implementation of security in a network		

Information contained within this document has been republished under the terms of the Open Government Licence v3.0 © Crown copyright (2019)

Standard Specific Guidance for Training Providers – Cyber Security Technologist

V5.0 April 2019

Professional development activities plan

BCS has defined a number of professional development activities that support wider professional and career development. These activities have been associated with the various levels of responsibility, and the activities listed in the table below represent those that are appropriate for a cyber security technologist apprentice.

Training providers may wish to engage in assisting the apprentice in some of these activities as they can contribute towards the portfolio of evidence. The recommended activities include those shown below.

Professional development activities	Appropriate to the role	Agreed with apprentice and employer
Participating in group activities inside or outside the working environment that can assist with the development of interpersonal skills.	<input type="checkbox"/>	<input type="checkbox"/>
Undertaking unpaid activities that can help to develop professional skills or offer additional insight into, or understanding of, their working role.	<input type="checkbox"/>	<input type="checkbox"/>
Undertaking learning in subjects relevant to, but not directly related to, their role (e.g. mentoring skills, cultural awareness and diversity training), perhaps through self-study or evening classes.	<input type="checkbox"/>	<input type="checkbox"/>
Gaining basic knowledge of the employing organisation, its business, structure, culture, products/services, operations and terminology.	<input type="checkbox"/>	<input type="checkbox"/>
Gaining knowledge of IT activities in the employing organisation external to their function.	<input type="checkbox"/>	<input type="checkbox"/>
Exploring a topic that is not part of their normal responsibilities, and presenting findings to colleagues and/or management.	<input type="checkbox"/>	<input type="checkbox"/>
Attending meetings, seminars and workshops organised by a professional body, and reading published material such as journals and web content.	<input type="checkbox"/>	<input type="checkbox"/>
Undertaking learning and practice in the techniques of team and collaborative working. Gaining an understanding of the underlying concepts.	<input type="checkbox"/>	<input type="checkbox"/>
Undertaking learning and practice in oral and written communications, including report writing and presentations.	<input type="checkbox"/>	<input type="checkbox"/>

Information contained within this document has been republished under the terms of the Open Government Licence v3.0 © Crown copyright (2019)

Standard Specific Guidance for Training Providers – Cyber Security Technologist

V5.0 April 2019

Cyber Security Technologist Template 2 – Weekly Diary

Week number	Activities completed	Competencies displayed	Supporting evidence

Cyber Security Technologist Template 3 – Periodic Workplace Competence Assessment and Remedial Action Plan

This template can be used to track the competencies being applied in the workplace on a continual / periodic basis. The training provider can then discuss any gaps with the employer and make a plan to redress the balance.

Competence assessment

In the normal course of work, is the apprentice demonstrating these competencies?	Sufficiently applied to meet minimum competence standard	Start/stop/continue – what should the apprentice start, stop or continue doing in order to develop this competence?
Threats, hazards, risks and intelligence	<input type="checkbox"/>	
Developing and using a security case	<input type="checkbox"/>	
Organisational context	<input type="checkbox"/>	
Future trends	<input type="checkbox"/>	
Design build and test a network	<input type="checkbox"/>	
Analysing a security case	<input type="checkbox"/>	
Structured and reasoned implementation of security in a network	<input type="checkbox"/>	

Remedial action plan

An important function of the training provider is to act as an advisor to the apprentice and the employer to ensure that the programme remains on track and any concerns are addressed. The training provider should agree how best to provide ongoing assistance / advice throughout the apprenticeship, possibly as part of their contract / service agreement with the apprentice's employer.

If any remedial action is required, the table below could be used to record it.

Remedial action (if any) required to deliver the plan/SLA agreed with the employer and apprentice to demonstrate the technical competencies in the employer's normal workplace environment:
--

Please continue on a separate sheet as required.

Cyber Security Technologist – The Employer Reference Overview

This template and guidance will assist the training provider in supporting the employer when completing the employer reference, which forms a key part of the final end point assessment.

This employer reference template should be used to record the employer's comments against the grading minimum standards, criteria and dimensions, as set out in the Cyber Security Technologist standard.

For each area of technical competence and behavioural proficiency, the employer will be asked to provide an overall evaluation on a three-point scale:

- **Met** – they have observed this behaviour in the apprentice most of the time;
- **Exceeded** – they have observed this behaviour in the apprentice all of the time;
- **Not Met** – they have not observed this behaviour in the apprentice.

They should perform an evaluation using the checkboxes, and then provide an overall evaluation of the apprentice's competence or proficiency.

The template shows the type of activities that could demonstrate the required competencies and behaviours being applied in the workplace. There are always differences between individual employers and their requirements so there is the opportunity for the employer to include any other activity that they think demonstrates the apprentice's competence. It should be completed by a senior member of the team, who is able to comment directly on work activities.

Section 1

Technical competence evaluation

Please provide your evaluation of the technical competence of the apprentice using the tables below. Under each heading is a list of activities that a competent apprentice should be able to demonstrate.

Please indicate your assessment of each competence using the checkboxes, and then provide an overall evaluation of the apprentice's technical competence:

Competence – Threats, Hazards, Risks and Intelligence

In your view, is the apprentice competent to:	The apprentice has MET this requirement	The apprentice has EXCEEDED this requirement	The apprentice has NOT MET this requirement
Discover (through a mix of research and practical exploration) vulnerabilities in a system?	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>
Analyse and evaluate security threats and hazards to a system or service or processes. Be aware of and demonstrate use of relevant external sources of threat intelligence or advice (e.g. CERT UK). Combine different sources to create an enriched view?	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>
Research and investigate some common attack techniques and recommend how to defend against them. Be aware of and demonstrate use of relevant external sources of vulnerabilities (e.g. OWASP)?	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>
Undertake a security risk assessment for a simple system without direct supervision and propose basic remediation advice in the context of the employer?	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>

- **Met** – you have observed this behaviour in the apprentice most of the time.
- **Exceeded** – you have observed this behaviour in the apprentice all of the time.
- **Not Met** – you have not observed this behaviour in the apprentice.

What is your overall evaluation of the apprentice's competence in threats, hazards, risks and intelligence?

Please give reasons, together with supporting examples, why you think the apprentice has demonstrated this level of competence in this area.

Please continue on a separate sheet if required.

Competence – Developing and Using a Security Case

In your view, is the apprentice competent to:	The apprentice has MET this requirement	The apprentice has EXCEEDED this requirement	The apprentice has NOT MET this requirement
Source and analyse a security case (e.g. a Common Criteria Protection Profile for a security component) and describe what threats, vulnerability or risks are mitigated and identify any residual areas of concern?	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>
Develop a simple security case without supervision. (A security case should describe the security objectives, threats, and for every identified attack technique identify mitigation or security controls that could include technical, implementation, policy or process)?	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>

- **Met** – you have observed this behaviour in the apprentice most of the time.
- **Exceeded** – you have observed this behaviour in the apprentice all of the time.
- **Not Met** – you have not observed this behaviour in the apprentice.

What is your overall evaluation of the apprentice's competence in recognises anomalies in observed network data structures?

Please give reasons, together with supporting examples, why you think the apprentice has demonstrated this level of competence in this area.

Please continue on a separate sheet if required.

Standard Specific Guidance for Training Providers – Cyber Security Technologist

V5.0 April 2019

Competence – Organisational context

In your view, is the apprentice competent to:	The apprentice has MET this requirement	The apprentice has EXCEEDED this requirement	The apprentice has NOT MET this requirement
Identify and follow organisational policies and standards for information and cyber security.	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>
Operate according to service level agreements or employer defined performance targets.	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>

- **Met** – you have observed this behaviour in the apprentice most of the time.
- **Exceeded** – you have observed this behaviour in the apprentice all of the time.
- **Not Met** – you have not observed this behaviour in the apprentice.

What is your overall evaluation of the apprentice's competence in accurately reports information?

Please give reasons, together with supporting examples, why you think the apprentice has demonstrated this level of competence in this area.

Please continue on a separate sheet if required.

Competence – Future trends

In your view, is the apprentice competent to:	The apprentice has MET this requirement	The apprentice has EXCEEDED this requirement	The apprentice has NOT MET this requirement
Investigate different views of the future (using more than one external source) and trends in a relevant technology area and describe what this might mean for a business, with supporting reasoning.	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>

- **Met** – you have observed this behaviour in the apprentice most of the time.
- **Exceeded** – you have observed this behaviour in the apprentice all of the time
- **Not Met** – you have not observed this behaviour in the apprentice.

What is your overall evaluation of the apprentice’s competence in recognises normal features of log files?

Please give reasons, together with supporting examples, why you think the apprentice has demonstrated this level of competence in this area.

Please continue on a separate sheet if required.

Competence – Design Build and Test a Network

In your view, is the apprentice competent to:	The apprentice has MET this requirement	The apprentice has EXCEEDED this requirement	The apprentice has NOT MET this requirement
Design, build, test and troubleshoot a network incorporating more than one subnet with static and dynamic routes, that includes servers, hubs, switches, routers and user devices to a given design requirement without supervision.	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>
Provide evidence that the system meets the design requirement.	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>

- **Met** – you have observed this behaviour in the apprentice most of the time.
- **Exceeded** – you have observed this behaviour in the apprentice all of the time.
- **Not Met** – you have not observed this behaviour in the apprentice.

What is your overall evaluation of the apprentice's competence in recognises main features of network layer?

Please give reasons, together with supporting examples, why you think the apprentice has demonstrated this level of competence in this area.

Please continue on a separate sheet if required.

Competence – Analysing a Security Case

In your view, is the apprentice competent to:	The apprentice has MET this requirement	The apprentice has EXCEEDED this requirement	The apprentice has NOT MET this requirement
Analyse security requirements (functional and non-functional security requirements that may be presented in a security case) against other design requirements (e.g. usability, cost, size, weight, power, heat, supportability etc.), given for a given system or product.	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>
Identify conflicting requirements and propose, with reasoning, resolution through appropriate trade-offs.	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>

- **Met** – you have observed this behaviour in the apprentice most of the time.
- **Exceeded** – you have observed this behaviour in the apprentice all of the time.
- **Not Met** – you have not observed this behaviour in the apprentice.

What is your overall evaluation of the apprentice's competence in uses automated tools?

Please give reasons, together with supporting examples, why you think the apprentice has demonstrated this level of competence in this area.

Please continue on a separate sheet if required.

Competence – Structured and Reasoned Implementation of Security in a Network

In your view, is the apprentice competent to:	The apprentice has MET this requirement	The apprentice has EXCEEDED this requirement	The apprentice has NOT MET this requirement
Design and build a simple system in accordance with a simple security case. Provide evidence that the system has properly implemented the security controls required by the security case. The system could be either at the enterprise, network or application layer.	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>
Select and configure relevant types of common security hardware and software components to implement a given security policy.	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>
Design a system employing a crypto to meet defined security objectives. Develop and implement a key management plan for the given scenario / system.	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>

- **Met** – you have observed this behaviour in the apprentice most of the time.
- **Exceeded** – you have observed this behaviour in the apprentice all of the time.
- **Not Met** – you have not observed this behaviour in the apprentice.

What is your overall evaluation of the apprentice's competence in undertakes root cause analysis?

Please give reasons, together with supporting examples, why you think the apprentice has demonstrated this level of competence in this area.

Please continue on a separate sheet if required.

Standard Specific Guidance for Training Providers – Cyber Security Technologist

V5.0 April 2019

Section 2

Behaviours, business skills and level of responsibility evaluation

Please provide an evaluation as to the level of responsibility of the apprentice you are providing a reference for using the tables below. Under each heading is a list of proficiencies that a competent apprentice should display. Please indicate your assessment of the apprentice's proficiency using the checkboxes, and then provide an overall evaluation of the apprentice's proficiency.

Proficiency – Business Skills

In your view, is the apprentice proficient at:	The apprentice has MET this requirement	The apprentice has EXCEEDED this requirement	The apprentice has NOT MET this requirement
Demonstrating an analytical and systematic approach to issue resolution?	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>
Taking the initiative in identifying and negotiating appropriate personal development opportunities?	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>
Demonstrating effective communication skills?	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>
Contributing fully to the work of teams?	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>
Planning, scheduling and monitoring own work (and that of others where applicable) competently within limited deadlines and according to relevant legislation, standards and procedures?	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>
Appreciating the wider business context, and how own role relates to other roles and to the business of the employer or client.?	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>

- **Met** – you have observed this behaviour in the apprentice most of the time.
- **Exceeded** – you have observed this behaviour in the apprentice all of the time.
- **Not Met** – you have not observed this behaviour in the apprentice.

What is your overall evaluation of the apprentice's business skills?

Please give reasons, together with supporting examples, why you think the apprentice has demonstrated this level of proficiency in this area.

Please continue on a separate sheet if required.

Proficiency – Complexity

In your view, is the apprentice proficient at:	The apprentice has MET this requirement	The apprentice has EXCEEDED this requirement	The apprentice has NOT MET this requirement
Performing a range of work, sometimes complex and non-routine, in a variety of environments?	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>
Applying methodical approaches to issue definition and resolution?	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>
Undertaking all work in accordance with agreed safety, technical and quality standards, using appropriate methods and tools.	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>

- **Met** – you have observed this behaviour in the apprentice most of the time.
- **Exceeded** – you have observed this behaviour in the apprentice all of the time.
- **Not Met** – you have not observed this behaviour in the apprentice.

What is your overall evaluation of the apprentice's proficiency at handling complexity?

Please give reasons, together with supporting examples, why you think the apprentice has demonstrated this level of proficiency in this area.

Please continue on a separate sheet if required.

Proficiency – Autonomy

In your view, is the apprentice proficient at:	The apprentice has MET this requirement	The apprentice has EXCEEDED this requirement	The apprentice has NOT MET this requirement
Working under general direction?	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>
Using discretion in identifying and responding to complex issues and assignments?	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>
Usually receiving specific instructions and has work reviewed at frequent milestones?	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>
Determining when issues should be escalated to a higher level?	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>

- **Met** – you have observed this behaviour in the apprentice most of the time.
- **Exceeded** – you have observed this behaviour in the apprentice all of the time.
- **Not Met** – you have not observed this behaviour in the apprentice.

What is your overall evaluation of the apprentice's proficiency to work autonomously?

Please give reasons, together with supporting examples, why you think the apprentice has demonstrated this level of proficiency in this area.

Please continue on a separate sheet if required.

Proficiency – Influence

In your view, is the apprentice proficient at:	The apprentice has MET this requirement	The apprentice has EXCEEDED this requirement	The apprentice has NOT MET this requirement
Interacting with and influencing colleagues?	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>
Having working level contact with customers, suppliers and partners?	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>
Supervising others or make decisions which impact the work assigned to individuals or phases of projects?	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>
Making decisions which influence the success of projects and team objectives?	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>

- **Met** – you have observed this behaviour in the apprentice most of the time.
- **Exceeded** – you have observed this behaviour in the apprentice all of the time.
- **Not Met** – you have not observed this behaviour in the apprentice.

What is your overall evaluation of the apprentice's ability to influence?

Please give reasons, together with supporting examples, why you think the apprentice has demonstrated this level of proficiency in this area.

Please continue on a separate sheet if required.

Section 3

Professional development

A number of professional development activities have been identified as part of the SFIA^{plus} framework to help career development. These activities have been associated with the various levels of responsibility, and the activities listed in the table below represent those that are appropriate for a cyber security technologist apprentice.

In your view, is the apprentice undertaking any of the following professional development activities:	The apprentice is demonstrably undertaking this activity	The apprentice is NOT demonstrably undertaking this activity
Participating in group activities inside or outside the working environment that can assist with the development of interpersonal skills?	<input type="checkbox"/>	<input type="checkbox"/>
Undertaking pro bono (unpaid) activities that can help to develop professional skills or offer additional insight into, or understanding of, their working role?	<input type="checkbox"/>	<input type="checkbox"/>
Undertaking learning in subjects relevant to, but not directly related to, their role (e.g. foreign language courses, mentoring skills, cultural awareness and diversity training), perhaps through self-study or evening classes?	<input type="checkbox"/>	<input type="checkbox"/>
Gaining basic knowledge of the employing organisation, its business, structure, culture, products/services, operations and terminology?	<input type="checkbox"/>	<input type="checkbox"/>
Gaining knowledge of IT activities in the employing organisation external to their function?	<input type="checkbox"/>	<input type="checkbox"/>
Exploring a topic that is not part of their normal responsibilities, and presenting findings to colleagues and/or management?	<input type="checkbox"/>	<input type="checkbox"/>
Attending meetings, seminars and workshops organised by a professional body and reading published material such as journals and web content?	<input type="checkbox"/>	<input type="checkbox"/>
Undertaking learning and practice in the techniques of team and collaborative working. Gaining an understanding of the underlying concepts?	<input type="checkbox"/>	<input type="checkbox"/>
Undertaking learning and practice in oral and written communications, including report writing and presentations?	<input type="checkbox"/>	<input type="checkbox"/>

What is your overall evaluation of the apprentice's ability to undertake wider professional development?

Please continue on a separate sheet if required.

Overall impressions and constructive feedback

This section is an opportunity for you to provide written feedback outside the rigid competency structure.

It is a free text field to allow you to share general thoughts on the apprentice's performance in case you were unable to say everything you wanted to say using the structured template. For example, you may want to highlight some of the areas where you have not been able to give the apprentice the exposure they would have liked.

We would welcome any general constructive development advice you may wish to give.

Please continue on a separate sheet if required.

Standard Specific Guidance for Training Providers – Cyber Security Technologist

V5.0 April 2019

Cyber Security Technologist Template 5 – Declaration and Evidence Checklists for the Completion of the Summative Portfolio

This template is to support the training provider in working with the apprentice and employer to ensure the successful completion of the summative portfolio

The checklists can be used by training providers to help them manage the process through to completion, although training providers may also substitute their own processes and documentation as they see fit.

The key responsibilities of the apprentice in producing their summative portfolio can be found in the General Guidance for Apprentices, Employers and Training Providers, as can generic guidance on how to select evidence to compile the summative portfolio.

The apprentice should gather artefacts and record information that can evidence their activities undertaken in the workplace. The portfolio of evidence should demonstrate the full range of competencies, as shown in this template, which are required by the standard to show that the apprentice can fulfil the role of a cyber security technologist.

Summative Portfolio Declaration

Apprentice declaration

Name	[first name] [surname]
ULN	[e.g.123456]
Declaration	[I confirm that all the evidence submitted is my own work and it has been completed as specified]
Signature	
Date	

Line manager declaration (employer)

Name	[line manager name]
Company	[employer name]
Declaration	I confirm that the work contained within this portfolio has, to the best of my knowledge, been completed solely by [apprentice's name]
Signature	
Date	

Training provider declaration (training provider)

Name	[observer name]
Company	[training provider name]
Declaration	I confirm that the work contained within this portfolio has, to the best of my knowledge, been completed solely by [apprentice's name]
Signature	
Date	

Cyber Security Technologist competencies evidence checklist

The defined competence areas and associated typical evidence are listed in this table. Not all employer businesses are identical so there will always be variation in the types of activity that will be carried out in the course of each apprentice's daily work; however, each cyber security technologist apprentice must be able to demonstrate evidence of every competence.

Competence		
Threats, hazards, risks and intelligence		
Minimum expected requirement	List the evidence in the portfolio that fulfils this requirement	Reflections on applying knowledge learnt
Discover (through a mix of research and practical exploration) vulnerabilities in a system.		
Analyse and evaluate security threats and hazards to a system or service or processes. Be aware of and demonstrate the use of relevant external sources of threat intelligence or advice (e.g. CERT UK). Combine different sources to create an enriched view.		
Research and investigate some common attack techniques and recommend how to defend against them. Be aware of and demonstrate use of relevant external sources of vulnerabilities (e.g. OWASP).		
Undertake a security risk assessment for a simple system without direct supervision and propose basic remediation advice in the context of the employer.

Standard Specific Guidance for Training Providers – Cyber Security Technologist

V5.0 April 2019

Competence		
Developing and using security case		
Minimum expected requirement	List the evidence in the portfolio that fulfils this requirement	Reflections on applying knowledge learnt
Source and analyse a security case (e.g. a Common Criteria Protection Profile for a security component) and describe what threats, vulnerability or risks are mitigated and identify any residual areas of concern.		
Develop a simple security case without supervision. (A security case should describe the security objectives, threats, and for every identified attack technique identify mitigation or security controls that could include technical, implementation, policy or process).		

Competence		
Organisational context		
Minimum expected requirement	List the evidence in the portfolio that fulfils this requirement	Reflections on applying knowledge learnt
Identify and follow organisational policies and standards for information and cyber security.		
Operate according to service level agreements or employer defined performance targets.		

Competence		
Future trends		
Minimum expected requirement	List the evidence in the portfolio that fulfils this requirement	Reflections on applying knowledge learnt
Investigate different views of the future (using more than one external source) and trends in a relevant technology area and describe what this might mean for your business, with supporting reasoning.		

Competence		
Design, build and test a network		
Minimum expected requirement	List the evidence in the portfolio that fulfils this requirement	Reflections on applying knowledge learnt
The apprentice should be able to design, build, test and troubleshoot a network incorporating more than one subnet with static and dynamic routes, that includes servers, hubs, switches, routers and user devices to a given design requirement without supervision.		
The apprentice should be able to provide evidence that the system meets the design requirement.		

Competence		
Analyse a security case		
Minimum expected requirement	List the evidence in the portfolio that fulfils this requirement	Reflections on applying knowledge learnt
The apprentice should be able to analyse security requirements (functional and non-functional security requirements that may be presented in a security case) against other design requirements (e.g. usability, cost, size, weight, power, heat, supportability etc.), given for a given system or product.		
The apprentice should be able to identify conflicting requirements and propose, with reasoning, resolution through appropriate tradeoffs.		

Competence		
Implement security in a network (structured and reasoned)		
Minimum expected requirement	List the evidence in the portfolio that fulfils this requirement	Reflections on applying knowledge learnt
The apprentice should be able to design and build a simple system in accordance with a simple security case. Provide evidence that the system has properly implemented the security controls required by the security case. The system could be either at the enterprise, network or application layer.		
The apprentice should be able to select and configure at least 2 types of common security hardware and software components to implement a given security policy.		
The apprentice should be able to design a system employing a crypto to meet defined security objectives. Develop and implement a key management plan for the given scenario/system.		

Generic levels of responsibility evidence checklist

Areas of responsibility and associated typical evidence are shown below.

Proficiency		
Business skills Demonstrates an analytical and systematic approach to issue resolution. Takes the initiative in identifying and negotiating appropriate personal development opportunities. Demonstrates effective communication skills. Contributes fully to the work of teams. Plans, schedules and monitors own work (and that of others where applicable) competently within limited deadlines and according to relevant legislation, standards and procedures. Appreciates the wider business context, and how their role relates to other roles and to the business of the employer or client.		
Minimum expected requirement	List the evidence in the portfolio that fulfils this requirement	Reflections on applying knowledge learnt
Evidence that you can demonstrate an analytical and systematic approach to issue resolution.		
Evidence that you can take the initiative in identifying and negotiating appropriate personal development opportunities.		
Evidence that you can demonstrate effective communication skills.		
Evidence that you can contribute fully to the work of teams.		
Evidence that you can plan, schedule and monitor own work (and that of others where applicable) competently within limited deadlines and according to relevant legislation, standards and procedures.		
Evidence that you can appreciate the wider business context, and how your role relates to other roles and to the business of the employer or client.
